

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims

Claim 1. (Previously Presented): A composition of matter comprising a compound having the formula

wherein R is $\text{N}_3\text{C}_6\text{H}_4$.

Claim 2. (Original): A pharmaceutical composition comprising a compound according to claim 1 and a pharmaceutically acceptable carrier for said compound.

Claim 3. (Withdrawn): A method of inhibiting prostate specific antigen production in a mammalian prostate cancer cell, the method comprising contacting said mammalian prostate cancer cell with a sufficient amount of a compound according to claim 1, such that prostate specific antigen production in said mammalian prostate cancer cell is inhibited.

Claim 4. (Withdrawn, Currently Amended): A method of inhibiting the growth of a human prostate cancer cell, the method comprising contacting said human prostate cancer cell with a ~~therapeutically effective~~ an amount of a compound according to claim 1, such that growth of said human prostate cancer cell is inhibited.

Claim 5. (Withdrawn): A method of antagonizing the function of the ligand binding domain of the androgen receptor polypeptide in a prostate cancer cell, said method comprising the step of contacting said prostate cancer cell with a sufficient amount of a compound according to claim 1, such that the function of the ligand binding domain of the androgen receptor is antagonized.

Claim 6. (Withdrawn): A method of antagonizing the effect of an androgen on a function of the ligand binding domain of the androgen receptor polypeptide in a prostate cancer cell, the method comprising the step of contacting said prostate cancer cell with a sufficient amount of a compound according to claim 1, such that the effect of an androgen on a function of the ligand binding domain of the androgen receptor polypeptide is antagonized.

Claims 7-10. (Canceled)

Claim 11. (Withdrawn): A method ~~for making a composition of matter comprising a compound that inhibits the growth of hormone refractory prostate cancer cells, wherein said method comprises the initial step of comprising~~ examining the physiological effect of said the compound of claim 1 on a mammalian prostate cancer cell wherein said prostate cancer cell expresses an exogenous wild type androgen receptor polynucleotide that encodes an androgen receptor polypeptide or an androgen receptor polypeptide variant, said cell further comprising an abnormal level of mRNA that encodes said androgen receptor polypeptide or said androgen receptor polypeptide variant when compared to the level of mRNA that encodes said androgen receptor polypeptide or said androgen receptor polypeptide variant in a normal prostate cell, ~~said initial step the method~~ comprising:

- (a) determining that said abnormal level of mRNA in said prostate cancer cell is at least two fold higher than the level of mRNA in said normal prostate cell;
- (b) contacting said the compound with said prostate cancer cell to provide a treated prostate cancer cell; and
- (c) examining one or more physiological characteristics of said treated prostate cancer cell.

Claim 12. (Withdrawn): A method for ~~making a composition of matter comprising a compound that inhibits the growth of hormone refractory prostate cancer cells, wherein said method comprises the initial step of comprising~~ examining the physiological effect of said the compound of claim 1 on a mammalian prostate cancer cell wherein said prostate cancer cell expresses an exogenous wild type androgen receptor polynucleotide that encodes an abnormal level of androgen receptor polypeptide or an abnormal level of androgen receptor polypeptide variant when compared to the level of androgen receptor polypeptide or androgen receptor polypeptide variant encoded by a normal prostate cell ~~said initial step~~ the method comprising:

(a) determining that said abnormal level of androgen receptor polypeptide or said abnormal level of androgen receptor polypeptide variant is at least two fold higher than the level of androgen receptor polypeptide or androgen receptor polypeptide variant in said normal prostate cell;

(b) contacting said the compound with said prostate cancer cell to provide a treated prostate cancer cell; and

(c) examining one or more physiological characteristics of said treated prostate cancer cell.

Claims 13-16. (Canceled)

Claim 17. (Previously Presented): The composition of claim 1, wherein R is

Claim 18. (Currently Amended): The composition of ~~claim 1~~ claim 2, wherein the compound is ~~an antagonist of~~ in an amount effective to antagonize a function of a ligand binding domain of an androgen receptor polypeptide in a prostate cancer cell.

Claim 19. (New): The composition of claim 2, wherein the compound is in an amount effective to inhibit the growth of hormone refractory prostate cancer cells.

Claim 20. (New): A method comprising reacting a compound of Formula 10b

Formula 10b

with a compound of Formula 7

Formula 7

to make the compound according to claim 1.

Claim 21. (New): A method comprising mixing the compound according to claim 1 with a pharmaceutically acceptable carrier to make a pharmaceutical composition.
